# INFRASTRUCTURE SYSTEMS

Stabilize critical infrastructure functions, minimize health and safety threats, and efficiently restore and revitalize systems and services to support a viable, resilient community.

## MISSION AREA

### EXAMPLE WORDING

Local gas and electric providers (corporations and rural cooperatives) have emergency plans that include considerations for business continuity and providing timely information to the county Emergency Operations Center and first responders.

Local partners, with assistance from law enforcement, conduct routine site assessments to identify safety, security and operational considerations at critical infrastructure such as electric substations, pipelines, water treatment and distribution systems, government facilities, and communication and transportation systems.

---

Examples demonstrate options to consider and are provided for training purposes only. The examples are intended to demonstrate how planning teams may incorporate the key tasks found on FEMA's Core Capability Development Sheets into planning documents (e.g. the Emergency Operations Plan, Mitigation Plan, Debris Management Plan, HazMat Plan, and so forth). The items in the Functional Areas section are FEMA-identified areas where gaps could exist for the associated core capability.

Counties should not re-design their Emergency Operations Plans around the Core Capabilities; stakeholders should integrate the capabilities within the EOP and in a format that is effective for the jurisdiction.
